

RMB16, CLT, and CLC will be discontinued as of January 31, 2010

Please note, the production line at our current location for the type RMB16 miniature leaded resistor and the type CLC and CLT miniature leaded capacitor will be discontinued in end of January-2010 and final shipment must be completed before end of 1st Quarter-2010 (March 31, 2010). If you need these products for any future requirements we suggest you consider placing your final orders accordingly.

We may resume production of these products in another location, but no specific plans to establish this product again have been finalized. Therefore until we can definitely say this for certain, we suggest you plan accordingly.

Thank you for your business over past years and please continue to consider BREL International for all your other passive component needs. You can visit our website at www.brelintl.com for further information on our current and future products.
